

QuickCubes for Dynamics AX

1-day implementation of a Full-package Business Intelligence Solution for Microsoft Dynamics AX

A QuickCubes solution gives you a dynamic view of the current state of your business – contrary to static and outdated paper reports.

Use QuickCubes with your favorite presentation tool and view data from all angles in a variety of multi-colored graphics. Define the criteria for your Key Performance Indicators, and let your QuickCubes solution provide you with an always updated and trustworthy basis for decision making - indicating deviations in due time for you to react.

Time is money and with QuickCubes costs are cut to a minimum. Forget about manually collecting data and pieces of information from every little corner of your business. QuickCubes automates the process and gives you instant information.

Solutions – with or without Presentation Tool

Solution 1:

Solution 2:

You can choose between two solutions that will meet your demands whether you need a full-package including presentation tool or already have a presentation tool.

With QuickCubes for Dynamics AX you can analyze:

• Finance

Provides detailed information about how your business is performing. Gives elaborate information of interim accounts and analyzes finance data by finance dimensions, various time periods, currencies and companies.

• Accounts Payable

Provides information about balances with vendors over time. Analyzes data by multiple currencies, finance dimensions, companies and various time periods.

• Accounts Receivable

Provides information about balances with customers over time. Analyzes data by multiple currencies, finance dimensions, companies and various time periods.

• Sales Analytics

Provides information about individual customer's buying patterns and about sales profitability. Analyzes data by sales types, currencies, time periods, order type, and companies. Insights can be used to evaluate, for example, discount terms for individual customers and thereby increase earnings. Can also be used to analyze your inventory and compare it to invoiced items to achieve reliable sales forecasts per customer or item.

• Vendor Analytics

Provides information about your company's buying patterns and turnover with each supplier. Analyzes data by various time periods, companies, and finance dimensions. Insights can be used to compare results to orders, and negotiate better terms and prices.

• Inventory Analytics

Provides information to optimize stock levels and stock turnover. Enables you to monitor your inventory stock value and turnover by item and to discover unprofitable items. Analyzes data by time periods.

• Production Analytics

Provides full overview of your production. Enables you to monitor scheduled goods, goods in process and finished goods. Gives insight into areas such as ability to deliver as scheduled, utilized resources, and deviation in cost and quantity.

Solution 1:

This is the right solution if you are already an experienced user of Business Intelligence and familiar with a presentation program – or if you wish to use Microsoft Office 2007 as presentation program.

- Complete Business Intelligence solution containing data warehouse including measures and dimensions – designed for Microsoft Dynamics AX.
- Easy editing without coding with timeXtender Solution Edition.
- Results can be viewed in your own Microsoft Office or SQL based presentation program.
- Microsoft based.

Total price:

15.000,00 €*

Solution 2:

This is the right solution if you are new to Business Intelligence.

- Complete Business Intelligence solution containing data warehouse including measures and dimensions – designed for Microsoft Dynamics AX.
- Easy editing without coding with timeXtender Solution Edition.
- Results are viewed in Analyzer: a 100% web based presentation program, including 1 Analyzer Report Designer and access for an unlimited number of web based users.
- Microsoft based.

Total price:

21.500,00 €*

- You can combine your QuickCubes for Microsoft Dynamics AX with your preferred presentation tool (front-end), such as Microsoft Office Excel, Microsoft Office SharePoint Server, TARGIT, Toolpack Solutions, Analyzer or other SQL based presentation programs.

*) Includes timeXtender, the most advanced tool available for building and maintaining your data warehouse and cubes without coding. Prices are based on a Solution Edition license of timeXtender. The Solution Edition license connects only to 1 data source and can only be purchased in combination with QuickCubes. For a solution with multiple data sources, a timeXtender Basis Edition license or Corporate Edition license should be purchased.

A maintenance fee of 20% of the promotion price will be added. This will give access to all new versions of the software and updates to the solution when available. All prices are exclusive of VAT.

Prerequisites:

- Dynamics AX version 3.0, 4.0 or 2009
- Applicable for both SQL Server and Oracle
- Microsoft SQL Server 2005/2008
- IIS for Analyzer client program
